PROFESSIONAL SUMMARY

Seeking a position to leverage my skills and expand my knowledge while contributing creative solutions to drive organizational growth. A results-oriented and self-motivated individual with a strong ability to quickly adapt to new technologies and environments. Capable of thriving in fast-paced, team-driven settings, offering valuable support and collaboration to achieve shared goals.

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, C++, HTML, JavaScript
- **Frameworks & Libraries:** Flask, Robot Framework, OpenCV, scikit-learn
- **Databases:** MySQL
- **Tools & Platforms:** GitHub, Jenkins, Eclipse, Visual Studio Code, Jira, AWS
- **Methodologies:** Agile/Scrum.
- **Soft Skills:** Analytical thinking, teamwork, communication, adaptability

PROJECTS

Air Quality Prediction Using Machine Learning

2024

- Built an air quality prediction model using Random Forest Algorithm in Python .
- Collected and preprocessed real-world datasets from public APIs and open sources.
- Integrated the model into a web application using Flask , HTML , CSS , and JavaScript .
- Improved data accuracy through feature engineering and handled missing values effectively

Incognito Website (IT Fest Event Portal)

2025

- Developed a web portal for event registration and information display for college IT fest.
- Created interactive pages using HTML , CSS , and JavaScript .
- Implemented navigation logic between event details and registration forms.
- Deployed the project on GitHub and ensured cross-browser compatibility.

Handmotion Scroll - Gesture-Based Web Navigation

2025

- Developed an innovative computer vision system using Python, OpenCV, and PyAutoGUI to control web scrolling via hand gestures
- Implemented real-time gesture detection with 90% accuracy by processing video feed frames
- Automated browser interactions through PyAutoGUI to simulate scroll events based on hand movements.
- Technical Stack: Python, OpenCV (Computer Vision), PyAutoGUI (Automation), NumPy (Data Processing)

IT Employee Data Simulation & Attrition Analysis (Presentation Project)

- Conducted simulation and analysis of IT employee performance, attrition, and compensation trends using Power BI .
- Visualized employee distribution across various domains (e.g., Software Development, QA, DevOps, Cloud) and identified the highest-paying domains based on experience, skills, and job level.
- Analyzed reasons behind employee turnover such as low satisfaction, poor work-life balance, and salary dissatisfaction .
- Presented insights through interactive dashboards, helping simulate hiring and retention strategies.

INTERNSHIP

Quality Assurance Engineer Intern

Ikabit Software Technology | 2025

- Developed and executed 50+ automated test cases using Robot Framework, reducing regression testing time by 30%
- Performed comprehensive REST API testing with Postman, validating 20+ endpoints for a web application
- Conducted manual functional and regression testing for web and Android applications, identifying 15+ critical defects
- Collaborated with developers to reproduce and resolve issues using Eclipse debugger and JIRA ticketing system
- Created detailed test documentation including test plans, cases, and defect reports

EDUCATION

Bachelor Of Computer Applications.

9.32 CGPA

Seshadripuram College (2021-2024).

Higher Secondary Education (PUC)

79.8%

Seshadripuram College (2019-2021).
